### Product Description

TCD – Thermal Cutting Device – the miraculous working system for the cut work embroidery.

Device is specially been designed to work on any branded multi head computerized embroidery machines. TCD works independently by its own controlled and can be synchronized with embroidery machine by using the computer.

Device is made in a simple format that any workers in any countries can use this device. Though this device is working with the Thermal Heat but it is made to work in all kind of environment

Device is made from good quality of Aluminum & crafted by the best engineers from Korea. Each and every device is made with the best crafts-man-ship of the best Korean engineers.

We Invent & Develop Technology Which Is Affordable & economically advantageous.

## **Functions and Features:**

- ✚ Easy to cut any synthetic fabric, 100% polyester, nylon, Felt, Satin, Organdge, or artificial leather [P.U]
- ✚ Accurate Cutting, Perfect synchronize between the embroidery works and patch cutting. First embroidery, than automatically cutting the patch as digitized and then again satin stitch / overlap stitch on the cutwork. The perfect orchestra of beautiful embroidery
- ✚ Easy to peel off the left over fabric after the cut work. It is not needed to keep the left over fabric to be there till the end of the embroidery work finishes. Once the cut work is been done, the peeling off the left over fabric is too easy to do. Also while peeling off, other embroidery works will not be disturbed or damaged.
- ✚ Easy to operate the heat setting. It is been made easy that any worker can operate the heat setting with fixed heat set with a simple button touch
- ✚ Cutting of multiple layers is possible without damaging the bottom layer
- ✚ Device can be fixed on left side, right side, front side – as per the need of the design
- ✚ Installing the device on new embroidery machines can be factory fitted with testing done in the factory on your designs
- ✚ Installing of the device on the old embroidery machines of any brands – German, Japanese, Korean or Chinese; is no problem. Make your old machine, a new earning master.
- ✚ Working Speed – Depending on the Cutting Fabric & the heat required. For General fabrics, the speed is as per the machine capability
- ✚ Uniquely Compact Design: Rich look, slick and simple design. Makes the older machine look more attractive and new. Easy to install on your current needle base

Embroidery has always been an art to enhance the fashion look on the garments. Attire looks elegant only with the embroidery. May it be hand embroidery or machine embroidery. In the last new years of this decade, computerized embroidery has made the world have a completely different look and made the fashion industry more venerable. More innovations with embroidery, combining the hand embroidery with machine embroidery, more value addition products and patch work; these all made the embroidery business take to a different segment and that to give more classy looks to the embroidery works.

When the word “Classy Embroidery” is been used, it has to be hand embroidery works and it means the works of Cut work embroidery, Patch Work Embroidery or bordado appliques. But this always took more time, more different kind of stages and the embroidery aliment needs to be worked at different stages and this may create more damage goods. This is where our TCD come handy.

TCD means Thermal Cutting Device, the system to make your “Classy Embroidery” look more CLASSIC, works made more easy and the synchronization between the embroidery works and the cutting system has orchestra in such a way that the final work that goes to the show room for sales, it is sold as the finest hand embroidery product. Saving of time, energy and almost no damages or miss-embroidered products – TCD helps to minimize your working stress and give you're the final product at one stage, at one time with more finer results and clean embroidery.
